

REMARKS

This responds to the Final Office Action dated May 15, 2008.

Claim 10 is amended and claim 67 is canceled; as a result, claims 10-12 and 53-66 are now pending in this application.

§102 Rejection of the Claims

Claims 10, 12 and 64 were rejected under 35 U.S.C. § 102(b) as being anticipated by Tsubota (U.S. Patent No. 5,361,660).

Applicant has amended claim 10 to include the subject matter of claim 67. Claim 67 was rejected as being obvious in view of the Tsubota reference and Lyon. Applicant believes amended claim 10 is not obvious in view of the Tsubota and Lyon references since, even if combined, the combination does not include or suggest each limitation recited in the claim. For instance, Applicant cannot find in the cited combination: delivering the lubricant to a periphery of an open upper end of the die hole, wherein the lubricant directed so as to be concentrated at a specific location on the periphery of the open upper end of the die hole such that the specific location on the periphery of the open upper end of the die hole has more lubricant than other locations on the periphery of the open upper end of the die hole, as recited in claim 10.

In contrast, the Tsubota reference discusses that “[t]he cutting oil from the oil supply source 23 is mixed with air and is fed in an atomized state in the form of upward intermittent spurts from the pressurized air supply source to the interior of the cylindrical tool die 11, such that it sticks to the lower tool 7.” (Col. 4, lines 13-18). Thus, the Tsubota reference discusses blowing atomized oil to cover the interior of the die. The atomized oil apparently covers the interior and the periphery of the die relatively equally.

In the Lyon reference, lubricant is delivered to the upper portion of the die to annular groove 37 by eight symmetrical passageways 41. (See Fig. 4 and col. 2, line 60 – col. 3, line 2). Thus groove 37 is filled equally all around with lubricant and the lubricant is not concentrated at any portion of the groove.

Accordingly, even if combined, the combination would have symmetrical lubrication at the upper open end of the die hole, as opposed to the lubricant being directed so as to be

concentrated at a specific location on the periphery of the open upper end of the die hole such that the specific location on the periphery of the open upper end of the die hole has more lubricant than other locations on the periphery of the open upper end of the die hole, as recited in claim 10.

Claims 12 and 64 include each limitation of their parent claim and are therefore also not obvious in view of the cited references. Reconsideration and allowance is respectfully requested.

§103 Rejection of the Claims

Claim 11 was rejected under 35 U.S.C. § 103(a) as being unpatentable over Tsubota (U.S. Patent No. 5,361,660) in view of Klint et al. (U.S. Patent No. 3,288,715).

Claim 11 includes each limitation of its parent claim and is not obvious in view of the cited references since the secondary reference does not overcome the deficiencies of the primary reference discussed above. Reconsideration and allowance is respectfully requested.

Claim 57 was rejected under 35 U.S.C. § 103(a) as being unpatentable over Tsubota in view of 3M.

Claim 57 includes each limitation of its parent claim and is not obvious in view of the cited references since the secondary reference does not overcome the deficiencies of the primary reference discussed above. Reconsideration and allowance is respectfully requested.

Claims 65 and 67 were rejected under 35 U.S.C. § 103(a) as being unpatentable over Tsubota in view of Lyon (U.S. Patent No. 2,821,156).

Claim 67 has been cancelled and the subject matter of claim 67 has been added to parent claim 10, discussed above.

Claim 65

Regarding claim 65, Applicant traverses the obviousness rejection. Applicant believes claim 65 is not obvious in view of the cited references since, even if combined, the combination does not include or suggest each limitation recited in the claim. For instance, Applicant cannot find in the cited combination: wherein the lubricant directed so as to be concentrated at a specific

location on the periphery of the open upper end of the die hole where the punch will cut through the aluminum portion of the sheet and such that the specific location on the periphery of the open upper end of the die hole has more lubricant than other locations on the periphery of the open upper end of the die hole, as recited in claim 65.

As discussed above, the Tsubota reference discusses blowing atomized oil to cover the interior of the die. The atomized oil apparently covers the interior and the periphery of the die relatively equally.

In the Lyon reference, lubricant is delivered to the upper portion of the die to annular groove 37 by eight symmetrical passageways 41. (See Fig. 4; and col. 2, line 60 – col. 3, line 2). Thus groove 37 is filled equally all around with lubricant and the lubricant is not concentrated at any portion of the groove.

Accordingly, even if combined, the combination would include symmetrical lubrication at the upper open end of the die hole; as opposed to the lubricant being directed so as to be concentrated at a specific location on the periphery of the open upper end of the die hole where the punch will cut through the aluminum portion of the sheet and such that the specific location on the periphery of the open upper end of the die hole has more lubricant than other locations on the periphery of the open upper end of the die hole, as recited in claim 65.

Reconsideration and allowance is respectfully requested.

Claim 66 was rejected under 35 U.S.C. § 103(a) as being unpatentable over Tsubota in view of Lyon, as applied to claim 65 above, and further in view of Klint et al, hereafter “Klint”.

Claim 66 includes each limitation of its parent claim and is not obvious in view of the cited references since the secondary reference does not overcome the deficiencies of the primary references discussed above. Reconsideration and allowance is respectfully requested.

CONCLUSION

Applicant respectfully submits that the claims are in condition for allowance, and notification to that effect is earnestly requested. The Examiner is invited to telephone Applicant's representative at (612) 359-3267 to facilitate prosecution of this application.

If necessary, please charge any additional fees or credit overpayment to Deposit Account No. 19-0743.

Respectfully submitted,
